PROFESSIONAL SUMMARY

Software development engineer in test with over two years of manual and automated testing experience across web platforms. Skilled in Cypress, Selenium WebDriver, and PyTest, with hands-on experience transitioning teams from manual-first workflows to CI/CD-integrated regression suites. Adept at API testing, cross-browser validation, and collaborating with Agile teams to translate requirements into robust test strategies.

TECHNICAL SKILLS

- **Testing:** Manual, Regression, Functional, Integration, UAT, Smoke, Exploratory, Cross-Browser, Mobile
- **Automation:** Selenium WebDriver, Cypress, PyTest, TestNG
- **API & Performance:** Postman, REST Assured, JMeter
- **Tracking & Reporting:** JIRA, Azure DevOps, TestRail, Allure
- **Languages & Tools:** Java, Python, SQL, Bash, Git, Docker, Jenkins, TeamCity CI, Chrome DevTools
- **Methodologies:** Agile, Scrum, TDD, BDD (Cucumber/Gherkin)
- **AI Tools:** Generative AI for Testing, Agentic AI, MCP, GitHub Copilot

WORK EXPERIENCE

TechNova Solutions Inc.

Apr 2025 - Dec 2025

QA Software Tester

Toronto, ON

- Supported approximately two production deployments per month across a SaaS project management platform, executing full regression, smoke, and sanity testing each cycle with TestRail for test plan management.
- Began with manual-first testing across all 12 release cycles; identified recurring regression patterns and scoped an automation initiative targeting the highest-value, most repetitive flows.
- Built a Cypress-based automated regression suite mid-engagement; as coverage expanded over subsequent cycles, automation absorbed an increasing share of regression effort - reducing cycle time by ~40% in later cycles.
- Conducted API testing using Postman and REST Assured on .NET/C# services, validating correctness, authentication, error handling, and edge cases across key endpoints.
- Performed SQL-based data validation on PostgreSQL and MongoDB to verify data integrity across transactional workflows and batch jobs.
- Collaborated with Scrum teams in sprint planning and refinement; used generative AI tools to accelerate test scenario generation and improve early-sprint defect identification.
- Maintained zero critical-defect escape rate across all 12 production deployments on TeamCity CI; mentored junior testers on test-case writing standards and JIRA defect management.

NOTABLE PROJECTS

E-Commerce Automation Framework

Personal Project

- Built a Page Object Model framework with Selenium WebDriver and Python for checkout, cart, and auth flows across Chrome, Firefox, and Safari; integrated TestRail, Jenkins CI, Dockerized test runs, and Allure reporting.

API Performance Benchmarking Suite

TechNova Solutions Inc.

- Integrated JMeter into a Jenkins CI pipeline on Azure VMs to load-test REST APIs under simulated peak traffic; delivered p95/p99 latency and throughput reports that directly informed infrastructure scaling decisions.

EDUCATION

Lambton College

Computer Programmer & Computer Management (CPCM)

2023 - 2025

Mississauga, ON
